

# CompuCom Enterprise Solutions: Network Transformation Workshop

The Network Transformation Workshop is a one-day collaborative session that connects your IT Leaders and network specialists with expert Solution Architects from CompuCom to build a vision and roadmap for evolving your network architecture to meet current and future needs.

## Build a Roadmap to the Network of the Future

The demands on the typical corporate network infrastructure are higher than ever. Many existing network infrastructures were not built to satisfy current demands placed on them, much less future initiatives such as the:

- ▶ Deployment of advanced technologies such as IP-based voice and video solutions
- ▶ Impact of virtualization, convergence, and cloud computing in the data center
- ▶ Use of storage networking protocols alongside traditional data
- ▶ Support of wireless and mobile devices
- ▶ Ever present need for robust security throughout

CompuCom has developed the Network Transformation Workshop to help our clients address these needs. During the workshop, your IT leaders and architects will collaborate with CompuCom Solution Architects, who are equipped with multivendor expertise, knowledge of current best practices and future technology directions, and are backed by CompuCom's 20+ years of network deployment experience. Our expert Solution Architects will guide your team through a facilitated workshop methodology where the goal is to establish a clear roadmap for evolving the network architecture to meet your organization's current and future network infrastructure requirements.

## Focus Areas of the Workshop

A key element of the Workshop is the gap analysis of the current network infrastructure against the desired state that will meet the long-term requirements of the business. It is important to perform this gap analysis both the enterprise architecture level as well as for each functional layers of the network, such as those below.

Network Topic	Functional Areas for Review
Switching & Routing	Core, Edge, Distribution, Virtualization, LAN, WAN
Wireless	Access Points, Client Devices, Controllers, Wireless Management, Mobility Services
Collaboration	Conferencing, Contact Center, Social Software, IP Communications, Messaging, Mobile Applications, Business Video, Telepresence
Security	Network Security, Secure Access Control, Email and Web Security, Secure Mobility, Security Management, Physical Security, IPS/IDS
Data Center	Architecture, Application Networking Services, Data Center Security, Data Center Switching, Storage Networking
Network Management	Network Management Solutions, Routing and Switching Management, Unified Communications Management, Security and Access Management

Once the analysis of the functional areas is complete, the Solution Architect will lead your team through an exercise to develop a **Network Transformation Roadmap** deliverable that incorporates projects, milestones, and dependencies to guide your organization to the desired future state over a finite timeframe.

Contact a CompuCom Account Executive to schedule a consultation with a Solution Architect to see if this Workshop or any of CompuCom's other Network Services can be of value to your networking strategy.

## Service Summary

**Expert CompuCom Networking Solution Architects lead you through a full-day workshop focused on transforming your Network Infrastructure. You receive a formal report of our findings, including a technology gap analysis and an Infrastructure Transformation Roadmap.**
